Vitor Curado

Ottawa, ON | (647) 781-7484 | Email | GitHub | LinkedIn | Website

Full-Stack Software Developer with cloud and infrastructure exposure. Experienced in designing, implementing, deploying and maintaining small scale full-stack applications, from end to end. Experienced primarily in Rust, TypeScript, Postgres and AWS with strong fundamentals, capable of quickly picking up similar stacks, adapted to low resource environments.

Skills

Languages: Rust, TS/JS, Java, Python, C++, SQL, Bash, HTML, CSS
Web frameworks: Axum, Express, Flask
Databases & data access: PostgreSQL, MongoDB, SQLx, SeaORM, Hibernate
Cloud & infrastructure: AWS (EC2 Graviton/ARM64), Terraform, Linux (Fedora, RHEL, Amazon Linux)
Deployment & CI/CD: Git, GitHub, Podman, Systemd, Nginx
Observability: Grafana, Prometheus, VictoriaMetrics
Rendering strategies(and engines used for each): SSG (Askama), SSR (Askama, Jinja2), CSR (React)
Security: Session-based authentication, password hashing (Argon2), CSP

Experience

Full-Stack Software Developer - Freelance *Dec 2025 - Present*

- Meet clients, maintain good relations with them, understand their desired workflows and business needs, and translate aforementioned into software solutions, updating them as necessary
- Expand feature portfolio in order to serve more local clients with software solutions
- Maintain the product(s) up to date, following software development best practices
- Host, deploy and maintain their applications
- List of websites being maintained: space4joy.com

Projects

Personal blog & CMS *Rust, TypeScript, PostgreSQL, AWS*

- A full-stack web application with the backend written in Rust, with both SSG pages built at compile time, offloading compute from prod, and dynamic SSR with added interactivity at compile time
- Deployed in an AWS Linux, ARM64 (Graviton) AWS EC2 instance, prod receives the latest binary from GHCR, thus moving the concern away from prod to CI.
- Prod is managed with Podman Quadlets, a more sophisticated way than a monolith systemd module, while for local development podman-compose may be utilised.
- The server is behind a Nginx reverse proxy with configured rate limit at the application layer
- Session-based authentication with passwords hashed using Argon2. Following security best practices, mindful of CSPs
- Using Prometheus, Grafana and VictoriaMetrics to observe latency (p50, p99), traffic (req/s), resources (RAM, CPU) and errors (5xx are server-related, 4xx are client-related)
- Handles technical SEO including page metadata, canonical URLs, robots.txt, page titles and dynamic sitemap generation
- Currently exploring terraform and DB backup strategies

Education

Algonquin College, Ontario College Diploma, Computer Programming *Jan 2023 - Apr 2025*

- Most of the classes were in Java (Fundamentals, OOP, Design patterns, ORMs)
- Heavy exposure to group assignments
- Did a significant project with *Python and MongoDB*, another one with *C++*, another one with *Dart and Flutter*
- Other languages with minor exposure include: HTML/CSS/JS (Web 101), COBOL

Certified Cloud Practitioner, AWS *Nov 2026 - Present*

- Familiarise with the AWS ecosystem
- Prepare for the AWS Solutions Architect (AWS SAA-C03)

Additional information

- **Availability, work authorisation, and relocation:** Ready to work immediately, willing to relocate Canada-wide, has valid work permit authorised for any employer.
- **Hobbies & interests:** Barbecue, baking, board and/or video games, D&D (never finished one, unfortunately)
- **Soft skills:** Deal with non-technical people, keyboard shortcut savvy, fast typer, work under pressure, team player
- **Languages:** English & Portuguese (fluent), Spanish & French (intermediate)
